Applicant's arguments with respect to claims 1, 6, 9, and 9 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 6, 8, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Lin et al., U.S. patent # 6,340,734.

Although the bulk of Lin's disclosure is directed to silsesquioxane polymers wherein aromatic ring bearing an alkali-soluble group is bonded to silicon via a C₂ or higher alkyl, it is nonetheless, now observed that an equivalent polymer is described in column 8, lines 55-57 as an alternative to the novel polymers that represent Lin's invention. Of course, hydroxybenzylsilsesquioxane/phenylsilsesquioxane copolymers having a molecular weight similar to that of the aforementioned inventive silsesquioxane would be desired (column 6, lines 7-10) as would a similar ratio of the units carrying alkali soluble groups to those devoid of alkali soluble groups (column 6, lines 5-7).

Claims 1, 6, 8, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by applicant's apparent admission that this polymer had already been taught in Japanese Patent no. 2567984. See the details under the heading, "Preparation Example" and the first paragraph under "Example 1". (It is conceived that, in fact, the patent only provides mention of a similar synthetic approach, but using different monomer materials. The
